

The ultimate business intelligence solution for Microsoft Dynamics™ GP

SharperLight powered by **philight**

Microsoft Partner
Silver Independent Software Vendor (ISV)

 Microsoft Dynamics™ GP

Sharperlight 

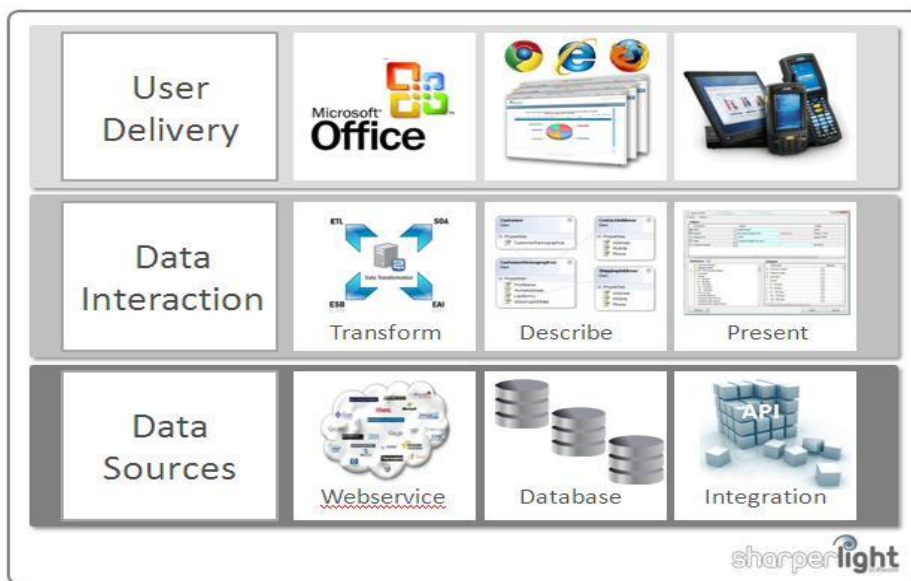

Data is rapidly acquired, then available to be shared and discussed

What is SharperLight?

SharperLight = Simplified Intelligence

SharperLight is more than your common reporting/business intelligence solution. SharperLight is a framework with a dynamic intelligent meta data layer (DataModel), which provides you with live real-time bi-directional functionality, not just for Dynamics GP, but also for customisations, 3rd-party modules and any other systems which provide you – the user – with the data you need to analyse and run your business, presented in reports, dashboards or graphs.

SharperLight provides you with access to all your data, which ultimately ensures you have all the information at your fingertips to run your business, using the Microsoft stack, live within a single report.

Microsoft Dynamics™ GP

Sharperlight

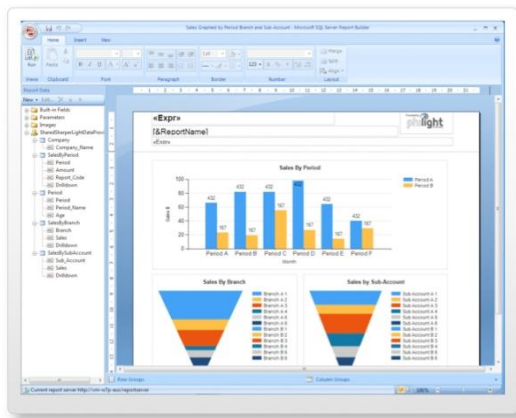

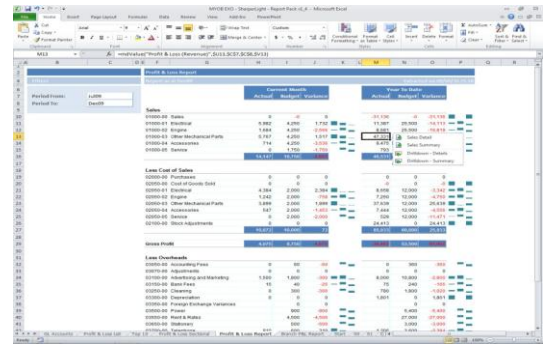

Fast and accurate decisions can be made with up-to-date information

Microsoft Office

Re-utilise your existing Excel reports, but now incorporating the smarts of SharperLight.

From Excel publish reports to the Web, a Mobile , MS SSRS, SharePoint or feed PowerPivot.

Microsoft SSRS

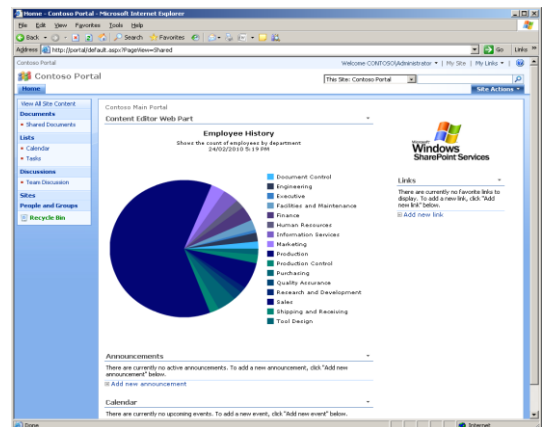

Instead of having IT try and write your reports for you, you can now write your own for MS SSRS using the SharperLight "Query Builder".

IT can continue to manage the publication of approved reports.

Microsoft SharePoint

Utilise the whole Microsoft Stack.

Publish your reports, graphs or dashboards in Microsoft SharePoint.

Microsoft PowerPivot

Use the latest in Microsoft technology ... **PowerPivot.**

SharperLight queries can feed PowerPivot.

Efficiencies are immediate

Simplification and ease-of-use

Use a single solution to analyse and report on everything already available in Dynamics GP, (such as, languages, images, customisations, 3rd-party add-ons) and all your other business systems.

The DataModel layer will future proof your investment in reporting, as the DataModel can be enhanced without breaking or causing the re-development of your existing content.

A single "Query Builder" throughout the whole framework ensures easy uptake, acceptance and consistency.

Reporting

Ad-hoc and structured reporting.

Have access to live drilldown or distribute predefined drill-through – find out what is really driving and impacting your business.

Create ad-hoc analyses, define reports to be used and shared with others or publish reports to a wider audience.

Bi-directional

Be able to read data from a single or multiple systems within one report.

Create Excel Templates or Web Entry Forms to load data back into Dynamics GP or your other solutions.

SharperLight inherits the security of the source systems to ensure compliance and data integrity.

The Web

Use SharperLight Publisher to access reports from anywhere in the world through a browser.

Write and publish reports through MS SSRS, JASPER, BIRT, etc. without having to understand the complexities of these solutions.

Other Unique Features

MS SSRS Query Builder & Drilldown; utilise the full combined power of Microsoft SSRS and SharperLight.

Be able to write your own reports in SSRS, using the SharperLight Query Builder within SSRS, and drilldown to any level of detail required from an SSRS report.

DataModel; this is the abstraction layer that end-users can use and interact with. It dynamically and intelligently adjusts to your specific application databases. Ensuring users do not have to rely on IT, developers or consultants to write reports for them.
